

## **Chatbot Application**

### Objective:

Create a basic chatbot Application using HTML, CSS, and JavaScript to records audio and plays it back.

### Technologies:

- HTML
- CSS
- JavaScript
- Visual Studio Code (with Live Server Extension)

### System Requirements:

- Any operating system (Windows, macOS, Linux).
- Web browser (Chrome, Firefox, Safari, Edge).
- Visual Studio Code with Live Server Extension.

### Steps to Run the Project:

1. Clone or Download:
  - Download the project files or clone the repository.
2. Open in Visual Studio Code:
  - Launch Visual Studio Code.
  - Open the project folder.
3. Install Live Server Extension:
  - Go to Extensions (Ctrl+Shift+X).
  - Search for "Live Server" and install it.
4. Run the Project:
  - Right-click on the index.html file.
  - Select "Open with Live Server" to view the chatbot in your web browser.

### Conclusion:

This project aims to develop a simple chatbot using basic web technologies. By following the steps mentioned, you can run the project using Visual Studio Code and interact with the chatbot in your preferred web browser.
